KORA and India

A note for Indian newsrooms: when the news goes public in India, the facts that matter most to Indian readers, and what KORA has not announced.

This note adds context for India. The press releases are the official announcement.

Timing

KORA Systems Inc. announces KORA at 7:30 p.m. IST on Tuesday, November 10, 2026 (6:00 a.m. Pacific). Indian coverage can run online that evening and in print on Wednesday, November 11.

Developers

KORA is built first for developers and creators: a full operating system from the kernel to the shell, with models and agents inside the OS. India is one of the largest developer communities in the world. GitHub's Octoverse 2025 report says India added more than 5.2 million developers on GitHub in 2025 and now has the world's largest base of public and open-source contributors, and it projects India to reach 57.5 million developers on GitHub by 2030.

Models

KORA is open at the model layer: any model from any lab, local or cloud, the user's choice. A local model can become the default mind of the machine. Local models run on the user's own silicon by default, frontier models join when the work calls for them, and sensitive information can stay on the device.

Snapdragon

KORA and Qualcomm Technologies have brought a complete Linux desktop OS to PCs with Snapdragon X2 Elite, with the ability to run a 26-billion-parameter language model entirely on the device and inference scheduled across the CPU, GPU and NPU. KORA comes to PCs in 2027, including Snapdragon-powered machines.

The founders and India

KORA's Chief Executive Officer, Kirt McMaster, co-founded Cyanogen.

KORA™

**WORK
CREATE
PLAY**

In December 2014 Micromax launched the Yu Yureka in India, the first phone of its Yu brand to run Cyanogen OS; Cyanogen had signed with Micromax to power Yu phones in India. This is background on the founders and is not part of KORA's announcement.

Not announced

KORA has not announced availability in India, pricing, devices or partners in India. KORA will share pricing and its business model closer to availability in 2027.
